

I need a UX/UI expert to enhance the design of my small app (5-7 screens) currently in production. The goal is to upgrade its look to a sleek, modern and minimalist style while also improving its navigation flow.

The ideal candidate should have experience in:

- UX/UI design, specifically for mobile applications
- Incorporating new visual assets into an existing app
- Enhancing navigation flow
- Implementing a modern and minimalist design aesthetic

I will need new icons and images to be integrated into the updated design. Please provide examples of your previous work that align with this project.

<http://www.prayeremergency.org/>

Its our app

White and blue theme colour

white and blue gradient

Actually, this is a prayer App, where when user send a prayer request, it will create a prayer request card so it is main important that showing the details we randomly kept those details in an bad manner but Just please recreate prayer request card with details in different pattern

I'm planning to add a new future in App. That's say pray zone. It's an additional work, but I have a overal idea if you create a that in design, I will create a new budget. Just remove notification icon in menu bar below and you just need to add pray zone And keep notification button above

For now, please do splash screen usually we created spare S3 but you just make one screen where only the images as to change. Accordingly with the title below. There will be a continue button like next next it has to be still same above images has to change in same screen And then create login screen actually in login screen, there will be two options in iOS one Google and another Apple, but we allow users to get sign in with MOBILES number for only 10 users per day after 10 users. The mobile sign in option will disappear so in android , there will be only Google sign in with MOBILES sign button and in iOS Google sign in and MOBILES sign in with Apple Sign
